National Fire Protection Association (NFPA) hazard ratings are designed for use by emergency response personnel to address the hazards that are presented by short-term, acute exposure to a material under conditions of fire, spill, or similar emergencies. Hazard ratings are primarily based on the inherent physical and toxic properties of the material but also include the toxic properties of combustion or decomposition products that are known to be generated in significant quantities.

HMIS Hazard Classification:

Health: 0
Flammability: 1
Physical Hazard: 0
Personal Protection: X – See PPE section.

Hazardous Material Identification System (HMIS[®] III) hazard ratings are designed to inform employees of chemical hazards in the workplace. These ratings are based on the inherent properties of the material under expected conditions of normal use and are not intended for use in emergency situations. HMIS[®] III ratings are to be used with a fully implemented HMIS[®] III program. HMIS[®] is a registered mark of the American Coatings Association (ACA).
